

PADS, THE PERFECT PARTNER

PRODUCTS > PADS > THE PERFECT PARTNER

STRENGTHS THAT DISTINGUISH THE RANGE

Born from the experience of racing and from the collaboration with car makers.

The Brembo range of brake pads ensures **maximum safety when braking** thanks to **absolute control of all production stages**. From research and development to testing, passing through production of the friction compound and mechanical processing.

Performance

Minimal braking space in all conditions. Maximum driving comfort. Maximum silence.

Range

More than 1400 items, for over 98% of the European car park.

Marking

Immediate identification of the pad.

Easy installation

Wide range of accessories and fitting kits for problem-free installation.

ECE-R90
ECE-R90 homologated.

MATERIALS, TREATMENTS AND PROCESSES

1 OE Quality

More than 100 different compounds. This is the result of the ongoing research extensive testing in the laboratory as well as on the road.

2 Scorching

Surface heat treating to ensure maximum efficiency even at the highest temperatures. Uses the technical specifications required by the Original Equipment.

3 Substrate

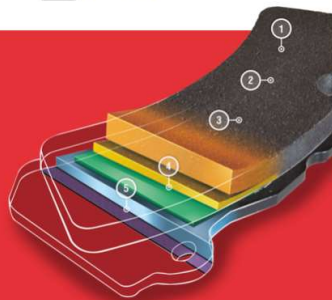

Heat insulation between pad, piston and brake fluid to dampen noise and vibrations.

4 OE direct moulding

OE direct moulding Pressing Process. The high pressure values allow for adhesion of friction materials to the metal support with maximum precision.

5 Metal support with shim

Decreases noise while maintaining braking safety. The various layers of the shim (rubber - steel - rubber) ensure a further reduction of vibrations and noise.

Quality packaging in contact with the world.

Designed to be robust and durable, it is characterised by a modern and dynamic look. Brembo packaging provides information and technical data, as well as the **website**, the **social networking icons** and symbols of international certifications required by the various markets. Thanks to the QR code you can directly access the video containing the **fitting instructions**.
